Practical – VII

Roll No.: T044	Name: SACHIN SINGH
Class: TY.IT	Batch: 1
Date of Assignment: 02/09/2026	Date/Time of Submission:01/09/2026

2A - Add Team Members

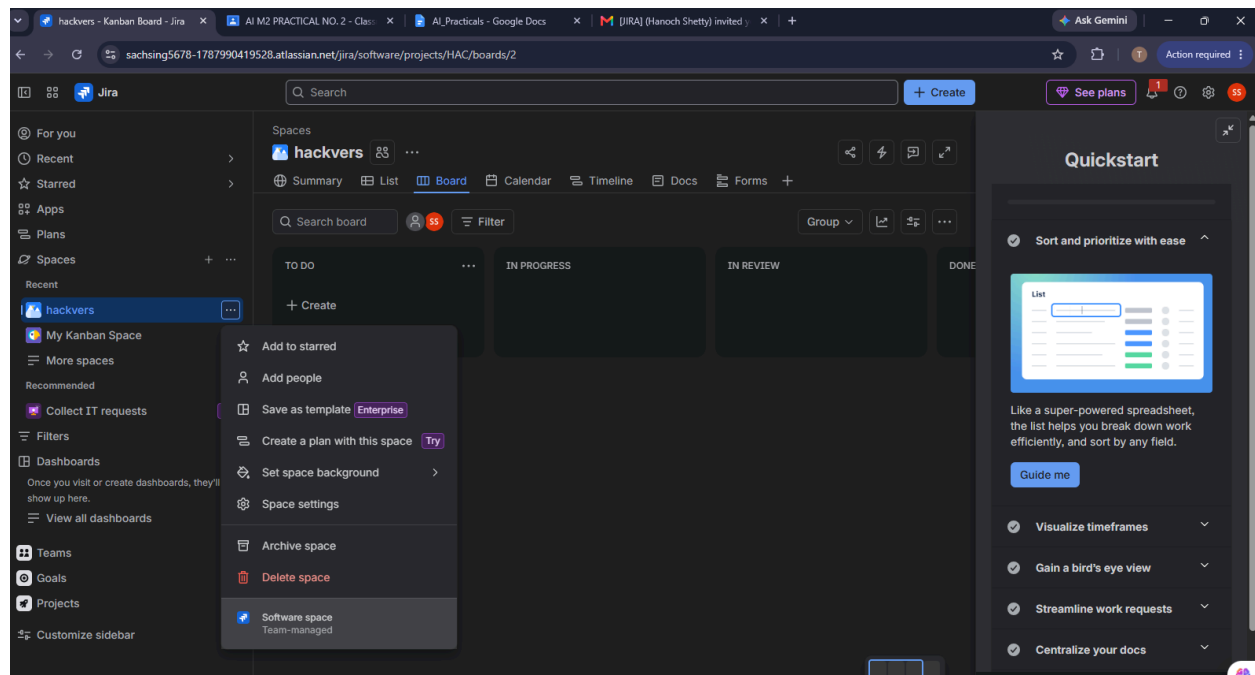

Open the previously created Full Stack Project space.

Click the three-dot (⋮) menu next to the space name.

From the menu, select Add people.

Jira projects are usually collaborative. Team members can be added to a space so that they can participate in project activities.

Adding team members is crucial for collaborative project management in Jira. This step involves navigating to the project's space settings to invite individuals for team participation.

The Add people to Full stack Project window will appear.

In the Names or emails field, enter the email address of the person you want to add.

You can add more than one person if required.

In the Role field, select the appropriate role for the team member.

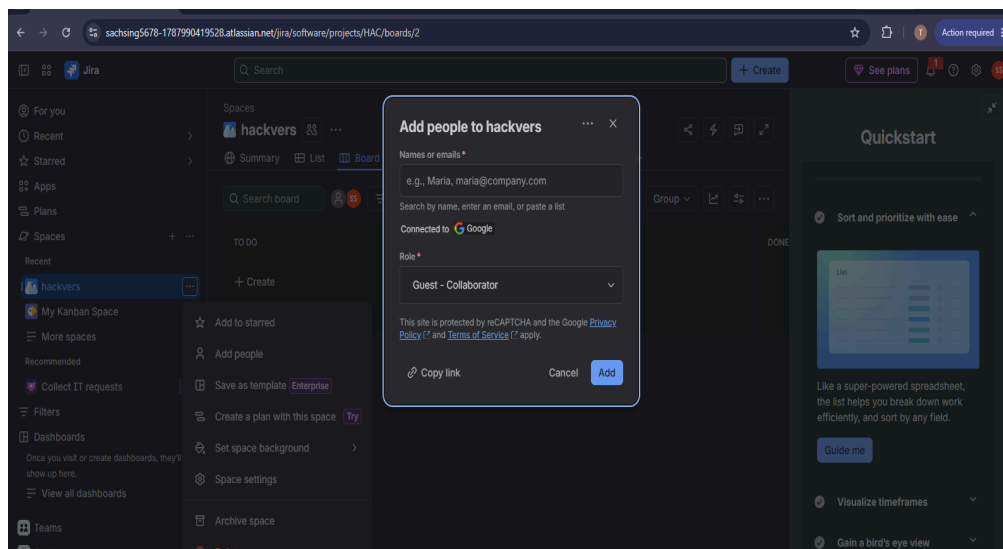

The screenshot shows options such as:

- Administrator
- Guest - Collaborator

Select the required role according to the responsibility of the team member.

A role determines what a person is allowed to do or access within the project/space.

Assigning roles such as Administrator or Guest helps control access and responsibilities within the Jira project. Proper role assignment ensures that team members have appropriate permissions to perform their specific tasks.

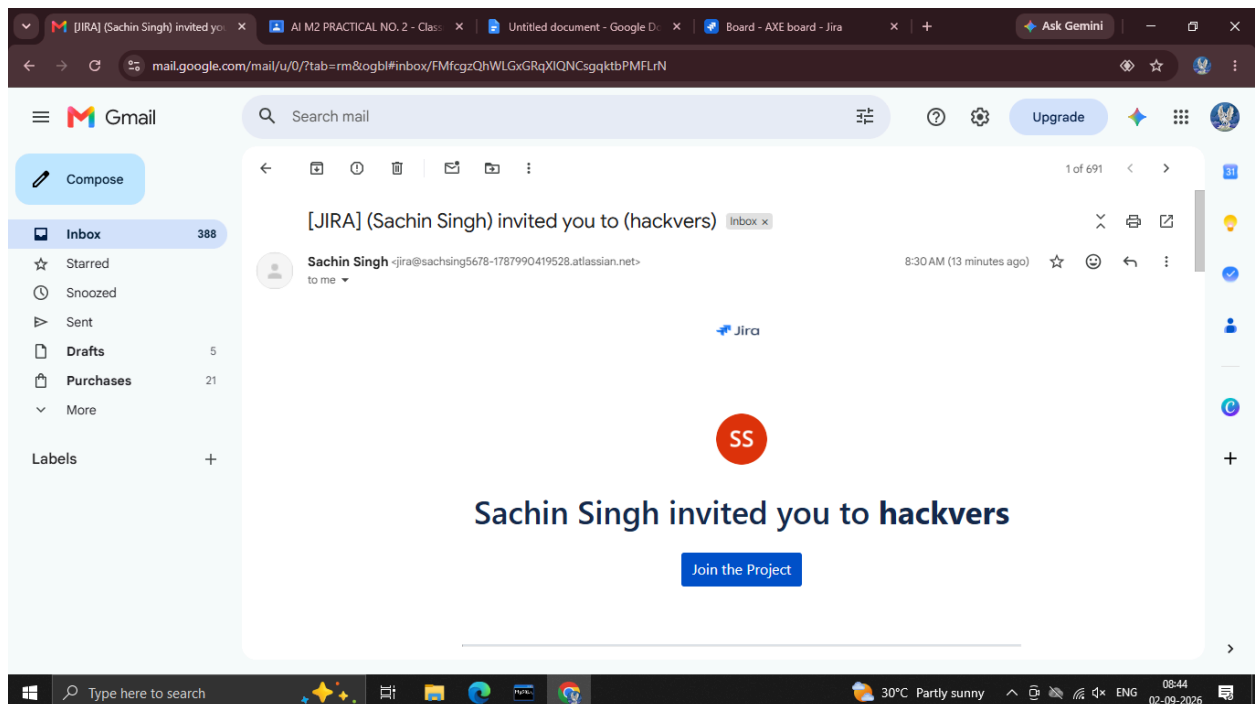

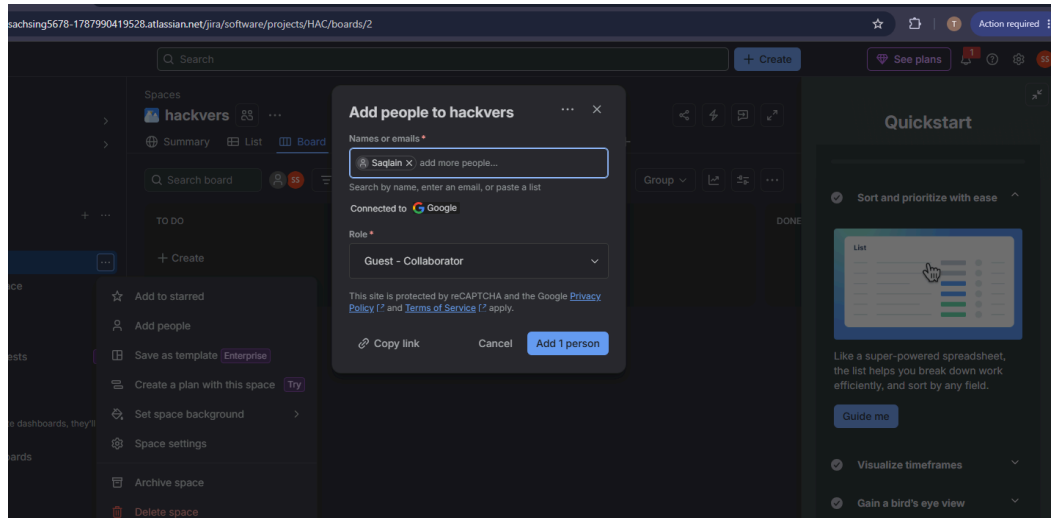

After entering the email address and selecting the role, click Add 1 person.

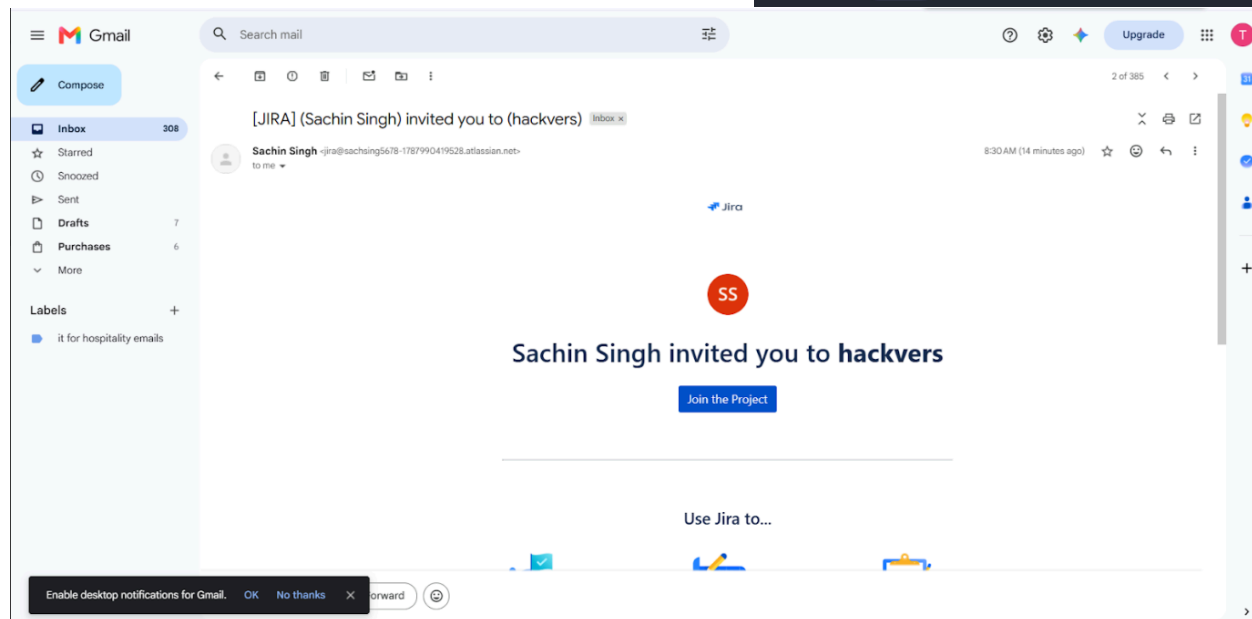

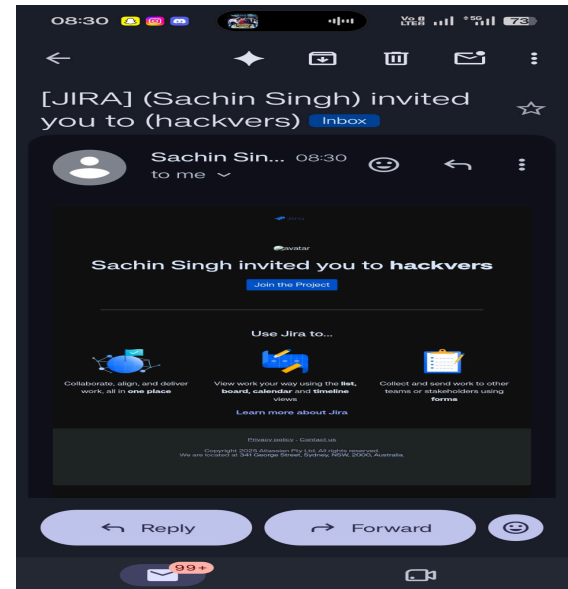

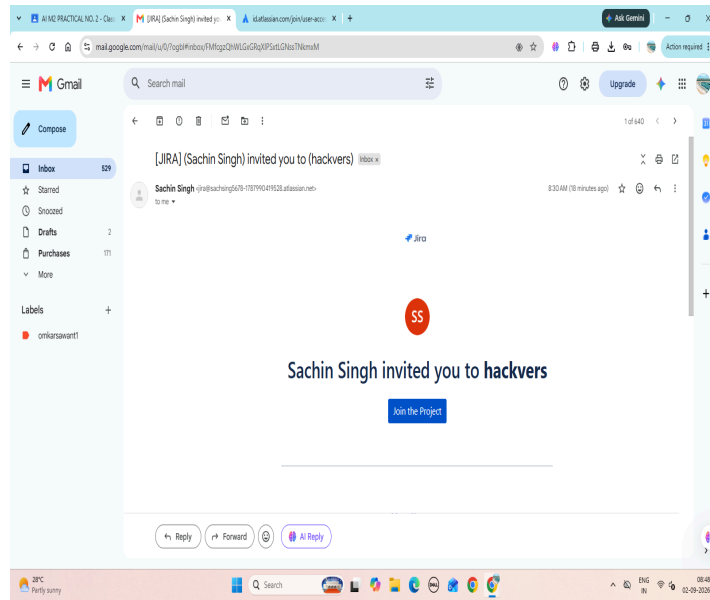

The selected person will be added to the space.

2B - Assign Roles

Follow same steps for 2B but add a group of People.

Jira allows the addition of multiple team members or groups to streamline project collaboration. This efficiency helps manage larger teams by simplifying the invitation process to a shared project space.

Once a team member is added, Jira automatically sends an invitation via email to notify the user. This notification allows the invited person to easily join the project space and start collaborating immediately.
